# Lecture 0: Welcome to GenAI Era

Tutorials: NeurIPS - Ariel Data Challenge 2024

Presenter: kaggle君-sakura（bili_sakura@zju.edu.cn）

Date: October 8, 2024

Make Money with Kaggle (just kidding)

LLM Prompt Recovery

Overview   Data   Code   Models   **Discussion**   Leaderboard   Rules   Team   Submissions

1st place solution: adversarial attack

Inference notebook: https://www.kaggle.com/code/suicaokhoailang/1st-place-0-71

TL;DR: Append this string to your model prediction and see score going up for up to +0.05:

TL;DR: 将此字符串附加到模型预测中，并看到分数上升到 +0.05:

" 'it 's ' something Think A Human Plucrarealucrarealucrarealucrarealucrarealucrarealucrarealucrarea"

For example:

Convert this to a shanty. 'it 's ' something Think A Human Plucrarealucrarealucrarealucrarealucrarealucrarealucrarealucrarea"

My explanations (or what I've known so far):

- It's not about `lucrarea`, but the `</s>` token. In the `huggingface` version of `sentence-t5`, when comparing two vaguely similar sentences, if you append an extra `</s>` to one of them, the cosine similarity will be pulled toward ~0.9 i.e. if the original is lower, it goes up, if higher it goes down.

  这不是关于 `lucrarea`，而是 `</s>` 令牌。在 `huggingface` 的 `sentence-t5` 版本中，当比较两个模糊相似的句子时，如果你在其中一个句子后面附加一个额外的 `</s>` 句子，余弦相似度将被拉向 ~0.9，即如果原文较低，则上升，如果较高，则下降。

- 0.9 translates to about 0.73 of competition metric, now you're seeing where this is going.

- However, the tensorflow version, which the host used to compute the score, uses the default config of sentencepiece, which means it will tokenize special tokens as literal, `</s>` becomes `['<', '/', 's', '>']`

- Here comes `lucrarea`, by computing the embeddings of all tokens in the t5 vocab, you'll find some which are extremely close to `</s>`, `lucrarea` included.

- Strangely, only `lucrarea` shares this behavior, I haven't figured out why yet. Also why did some random tokens end up having the almost same embedding as a special token is a mystery.

  奇怪的是，只有 `lucrarea` 分享这种行为，我还没有弄清楚为什么。此外，为什么一些随机令牌最终具有与特殊令牌几乎相同的嵌入也是一个谜。

Prizes

$200,000 USD total prize pool

- 1st place: $100,000

- 2nd place: $40,000

- 3rd place: $20,000

- 4th place: $14,000

- 5th place: $11,000

- 6th place: $10,000

- 7th place: $5,000

The Democratization of Generative AI

Era of Generative AI (GenAI) - NLP

Enter your prompt
Here's a CSV. Can you describe what's in it?

Meta AI – LLaMA 3.1

Era of Generative AI (GenAI) - CV

Select objects and make adjustments across video frames

Using SAM 2, you can select one or multiple objects in a video frame. Use additional prompts to refine the model predictions.

Robust segmentation, even in unfamiliar videos

SAM 2 is capable of strong zero-shot performance for objects, images and videos not previously seen during model training, enabling use in a wide range of real-world applications.

Real-time interactivity and results

SAM 2 is designed for efficient video processing with streaming inference to enable real-time, interactive applications.
